

## Data Transistor PD1515

(too old for an answer)

**Stephan Heidrich**

8 years ago

Hello everyone,

I'm looking for the data for the transistor mentioned in the subject. Is a power transistor in the TO3 package from the (early) 1970s. There is nothing to find in my 1980 ECAs and on the Internet. If the logo is of interest:

[http://www.postimage.org/image.php?v=Ts8\\_bhS](http://www.postimage.org/image.php?v=Ts8_bhS)

Greetings,  
Stephan

Hmm,  
maybe a 2SD1515?

maybe a 2SD1515?

No, it's a darlington.

Greetings,  
Stephan

2SD1515

Darlington, Power

Various

nnp transistors, transistors

Darlington, Power, 2SD1515, Silicon, NPN, 100W, 200V, 15A, 150

2SD1515

Silicon NPN + Darlington

N / A NPN

transistors, transistors

Category: Transistor, Darlington Transistor

MHz: <1 MHz

Amps : 15A

Volts: 200V

I search the data for the transistor mentioned in the subject.

Is a power transistor in the TO3 package from the (early)  
1970s. There is

nothing to find in my 1980 ECAs and on the Internet.

In ECA tdv2 85/86 there are some PDxxx, manufacturer was always Phb =  
Philco Radio Televisao, Ltda. Rua Tta. Virginia 299, Tatuape,  
Sao Paulo 4753, Brazil

Maybe someone has an old company data book.

Otherwise:

unique item? Throw away!

For little money, there is certainly better today.

Electronics Gerontology? Company (successor) write to.

Whole box full and the eBay customer wants data?  
Measuring with characteristic plotter, if necessary by hand.

Broken device? Estimate data from the circuit  
and over-dimension replacement.

*Post by Wolfgang Martens*  
unique piece?

No.

*Post by Wolfgang Martens*

Electronics-Gerontology? Company (successor) write to.

That would be too much of a good thing.

*Post by Wolfgang Martens*

Whole box full and the eBay customer wants data?

Measuring with characteristic plotter, if necessary by hand.

Nix eBay.

*Post by Wolfgang Martens*

Defective device?

In-line regulator in a laboratory power supply (two series regulators connected in series).

*Post by Wolfgang Martens*

estimate data from the circuit

and oversized replacement.

That should work with 2N3055 / 3771/72/73 etc. easily. I

would have liked more information, because the name is completely unknown to me .

Greetings,

Stephan
